

## TEXTUAL LOCATIONS IN THE THESIS BY CHAPTER AND PAGES

Source: Trafford and Leshem, 2008: 156 - 178

This model enables you to audit where these significant research components appear in your thesis by showing their respective chapter numbers in the empty boxes. The specific pages where text explains WHY and HOW the components are interconnected can be shown on the lines indicating that interconnectedness. Use the completed page in your viva to identify issues ~ quickly!

**NOTE** ~ Devoting attention to explaining the relationship BETWEEN components rather than the components themselves confirms that you understand why coherence in a research study is actually determined by those relationships.
